Gedung Konvensi & Eksebis " SKYCITY", JAKARTA

Located in the heart of JIEXPO Kemayoran, offering 30,000m² theatre / convention area, this 7-story RC structure combined with 24 m - 52m long span steel structure to attain a column-free spacious exhibition.

Currently all RC structure elements have been casted and heavy lifting process of big steel trusses have been finished. The building is slated for completion in April 2018.

Client : JIExpo

Architect : Aedas & Blue Antz

Contractor : Total Bangun Persada - Balfour Beatty Sakti JO

Gedung Indonesia 1, JAKARTA

Located in Jalan Thamrin, Jakarta, adjacent to Plaza Indonesia, this 63-story "twin buildings" with a total development area of approximately 170,000 sq.m are constructed with semi top down method and had started on July 2016. Currently work is on progress for B-5 construction.

Client: China Sonangol

Architect : Mercurio Lab Italy

Contractors : CCEED & Acset Indonesia J.O

Alam Sutera Condominiums, TANGERANG

Located very near Alam Sutera Mall, the Alam Sutera Condominium towers, or simply known as "The Lana", comprises of two apartment towers development, soaring 37-stories high with 6-level parking podium and 1-level basement. The unique shape that represents a balanced and harmonious lifestyle is not the only thing that creates structural design challenge. Various amenities such as pool, gym, and landscape features on top of the podium structure adds complexity to structural design. By mid 2017, all piling and excavation work have already been completed and preparation of the super-structure construction is currently underway.

Client : Brewin Mesa Sutera

Architect : Aedas & PDW Architect

Piling contractor: Indopora
